EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Edward Weisz on 11/2/2009.

The application has been amended as follows:

In claim 1, line 10, after "first retaining means arranged at the proximal end part of the..."

-- support -- has been added so that the claim reads, "first retaining means arranged at the proximal end part of the support sleeve..."

The abstract submitted on 3/24/2006 has been amended to remove the numbers and to be composed into paragraph form as follows:

A device for protecting an injection apparatus for injecting a product, the said apparatus comprising a needle and a piston connected to an actuating rod surmounted by a piston head, the said device comprising: a support sleeve, a protective sleeve for protecting the needle, first retaining means for holding the protective sleeve in its

standby configuration in a first position, second retaining means for holding the protective sleeve in its standby configuration in a second position, an intermediate collar comprising collaboration means for collaborating with the piston head, and deactivation means for deactivating the first and second retaining means. The second retaining means being able to be deactivated by the deactivation means of the intermediate collar by the release of the pressure of the piston head on the collaboration means of the intermediate collar to allow the protective sleeve to deploy under the action of pushing means.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: The prior art at the time the invention was made does not teach or suggest a second retaining means arranged at the proximal end part of a support sleeve for holding a protective sleeve in a second position wherein the protective sleeve is moved distally in relation to the support sleeve. This second retaining means being deactivated by the deactivation means of an intermediate collar by release of the pressure of the piston head to allow the protective sleeve to be deployed under the action of the pushing means.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
